DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/19/08 has been entered.

REJECTIONS WITHDRAWN

2. All of the 103 rejections set forth in the final rejection of 6/27/08, pages 2-3, paragraphs 3-4 have been withdrawn.

REJECTIONS REPEATED

3. There are no rejections repeated.

NEW REJECTIONS

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/522,634

Art Unit: 1794

5. Claims 3-5, 7, 9, 10, 12 and 19-33 rejected under 35 U.S.C. 103(a) as being unpatentable over Delson (US 5513654).

Page 3

Delson discloses a condom comprising a finishing powder which comprises a particulate, substantially water-insoluble (since calcium carbonate is substantially insoluble in water, see column 4, lines 42-56), inorganic compound having substantially spherical particle morphology (since a powder is substantially spherical), wherein the finishing powder is calcium carbonate (column 4, lines 42-56) which has a water solubility of less than 0.05 g per 100 g of water (since calcium carbonate is not soluble in water) and the powder is non-immobilized (column 4, lines 42-56).

Claims 7 and 9 recite method limitations (spray drying and Aman process) in a product claim. Method limitations are not germane to the patentability of a product in a product claim (MPEP 2113) and thus the prior art need not disclose spray drying and Aman process to read on applicant's claims as written.

Brindle fails to disclose applicant's recited ranges for circularity factor. However, finding the optimum range for circularity is obvious and well within the level of one of ordinary skill in the art since finding the workable or optimum range for a result effective variable is obvious (MPEP 2144). Furthermore, it is an expected result that lowering the circularity factor improves processability since rounder particles result in lower friction. It would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to have provided applicant's recited circularity factor in order to provide improved processability since rounder particles result in lower friction.

Allowable Subject Matter

6. Claim 6 is allowed. The prior art fails to teach or suggest applicant's recited condom wherein the inorganic salt is basic magnesium hydroxide.

ANSWERS TO APPLICANT'S ARGUMENTS

7. Applicant's arguments of 12/19/08 have been considered but are moot in view of the new grounds for rejection set forth above.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Miggins whose telephone number is 571-272-1494. The examiner can normally be reached on 1:00-10:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rena Dye can be reached on 571-272-3186. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
